Qatar Industrial Manufacturing Company (QIMC) was established in 1990 with 20:80 government-private equity interests respectively. The establishment of QIMC was in fact a clear manifestation of the particular attention given by the State of Qatar to the issue of the private sector's participation in the process of the country's economic development through investing in small and medium scale industries.

QIMC's initial authorised capital was set at 200 million QR (US$ 55 million), and was fully paid by 2002. In 2006, capital was increased by 50% to 300 millions QR. In 2009, capital was increased by 20% to 360 QR millions. In 2010, capital was increased by 10% to 396 millions QR.

The Extra-ordinary General Assembly of QIMC held on the 2nd March 2014, approved the distribution of bonus shares equivalent to 20% of the company's share capital for the year 2013. This amendment increased the Company's share paid-up capital to QR 475.2 million, distributed over 47,520,000 shares, having a nominal value per share of QR 10, as in 31st December 2014.

QIMC started business in May 1990, only to become within a short period of time, one of the pioneering companies in the field of small and medium scale industries in Qatar. Far from being confined to the State of Qatar, QIMC's activities have extended to other GCC countries such as Saudi Arabia and Oman.

Currently, QIMC has equity interest in 17 operational projects in various industrial sectors including chemicals, petrochemicals, construction materials and food processing, while one more project is under commissioning. QIMC is also currently investigating the economic feasibility of a number of other projects in collaboration with other local and foreign interested parties.

QIMC's investment strategy is essentially driven by the fundamental principle of investing in economically viable industrial projects that utilize locally/regionally available natural resources/intermediate products. QIMC also views its investment activity in the wider economic development context, and for that reason, it strives to maximize the macroeconomic benefits resulting from its investment activity to the national economy in terms of employment opportunities for the national labour force, transfer of modern technology and contribution to the country's balance of trade.

QIMC welcomes the participation of all investors and technology know-how holders in joint ventures in viable medium sized projects.

Dear Shareholders,

Qatar Industrial Manufacturing Co. (QIMC) started its activity in 1990 and soon became, within a short period of time, one of the leading small and medium industrial groups in Qatar, having ownership or partnership in seventeen (17) operational industrial establishments. QIMC has presence in all the industrial cities of Qatar and is active in petrochemicals, chemicals and building materials, in addition to food industry.

During 2015, QIMC witnessed the development of its existing businesses and the overcoming of their faced difficulties to insure their progress, modify their routes and enhance their production. In this connection, Qatar Clay Bricks Co. (QCBC) has established and started operating a modern hollow concrete blocks production unit and National Paper Industries Co. (NAPICO) has replaced its old paper rolls line with a new integrated automatic one, which will lead to the improvement of both production quality and quantity. Furthermore, Amiantit Qatar Pipes Co. (AQAP) and Qatar Paving Stones Co. (QPS) have successfully completed their new expansion projects and started commercial production from the new machines. In December 2015, Qatar - Tunisian Food Co. (QT-Food) witnessed the inauguration of its new plant in Salwa New Industrial Area by H.E. the Tunisian Prime Minister.

Work is also underway to complete the implementation stages of projects under construction, such as KLJ - Organic Qatar (KLJ-Q), where work is progressing in full swing to complete the civil engineering work and the plant operation is expected to start in 2018, on God's will. The Wood Plastic Composites (WPC) project, which is an expansion for Qatar Plastic Products Co. (QPPC), has nearly completed the civil work, and is expected to start equipment erection phase shortly. This factory is planned to be commissioned during the second quarter of 2016. At present, the project design for Chemicals Storage Facility in Ras Laffan Industrial City (RLIC) has been finalized and the equipment tendering is underway. This facility is expected to be completed by 2018.

QIMC is also exploring the expansion of some of its other existing business units, such as Qatar Aluminium Extrusion Co. (QALEX) where a study is underway to add a new extrusion line with other supporting units, in order to increase the production and to give flexibility in terms of product types and quality. We are also pleased to announce the success of QIMC in sustaining its performance despite the market downturns in 2015. Some of our group companies have also successfully exported their products to Gulf Cooperation Council (GCC) and other Arab countries. Moreover, we continue to explore and evaluate other industrial investment opportunities with various reputed international partners and they will be announced after their feasibility is ascertained.

We have made significant progress in our real estate projects and have obtained the necessary approvals from the concerned authorities for the iconic QIMC tower, which will replace the existing QIMC Headquarter. It is expected to start with the tower infrastructures at the beginning of this year and planned to be completed by 2019. Work is also underway for construction of Lusail tower, which is also planned to start during this year and to be completed by 2019. In Abu Saleel Logistic Warehouse project, the construction of labor accommodation and related amenities is at a very advanced stage, targeting to be delivered by May 2016, while the construction of the warehouse facilities is set to start by mid-2016 and planned to be completed in 2017.

Finally, I would like to take this opportunity to extend my sincere thanks and gratitude to H.H. Sheikh Tamim Bin Hamad Al-Thani, the Emir of Qatar, H.H. Sheikh Hamad Bin Khalifa Al-Thani, the Father Emir, H.E. Sheikh Abdullah Bin Nasser Al-Thani, Prime Minister & Minister of Interior, H.E. Dr. Mohammed Saleh Al-Sada, Minister of Energy & Industry, H.E. Sheikh Ahmed Bin Jassim Al-Thani, Minister of Economy & Trade, H.E. Ali Shareef Al-Emadi, Minister of Finance and all Ministers of the wise government for their continuous support to the progress and prosperity in this great country. Our thanks are also extended to all government and semi-government institutions, our partners, our distinguished customers and our valuable shareholders for their sustained support to QIMC for the achievement of its objectives and great ambitions.

Abdul Rahman Bin Mohammed Bin Jabor Al-Thani
Chairman

**Wood Plastics Composite (WPC)**

These composite materials or “Plastic Wood” are made of inert fiber materials (wood) and plastic. It is expected to substitute the use of natural wood outdoor, in countries like GCC where the prevailing weather conditions are very harsh during the summer. The product is eco-friendly, has aesthetic features, available in various colors and designs. It is maintenance free, has a longer lifespan than wood, which is facing increasing environmental pressures. The project is on the verge of its technology / equipment supplier selection and it is expected to be implemented shortly as an expansion in QPPC, a QIMC subsidiary.

**Chemical Storage facility in Ras-Laffan Industrial City (RLIC)**

This project in Ras-Laffan service area will be implemented to store chemicals for catering to the needs of local RLIC Industries’ requirement. Products shall be transferred from Mesaieed Industrial City (MIC) through tankers/trucks and products will be sold / delivered to different users. Expected chemicals to be stored in phase 1 are Caustic Soda lye (50%), Caustic Soda prills (98.5%), Hydrochloric acid (32%) and Sulfuric acid (98%). The project is under EIA approval.

**Plastic Drums**

In collaboration with its Indian partner, QIMC is currently implementing KLJ Organic – Qatar (KLJ-Q), which will be using these plastic drums for packing and exporting its Chlorinated Paraffin Waxes (CPW). Assessment of various equipment suppliers has been done. The project was proven viable as an add-on to KLJ-Q and equipment are expected be ordered shortly from the selected supplier.
QIMC Tower West Bay

QIMC envisioned having an iconic tower in West Bay Corniche Doha-Qatar, by converting the existing three stories office building into a high-rise mixed-use tower that will host signature hotel apartments, residential units, fully fitted out Grade A offices, high end retail and Food & Beverage outlets.

The podium is intended for a retail space which perfectly complements the 23 storey high office tower, 29 storey high hotel tower and 38 storey high residential tower. The whole project will offer 126 residential apartments and 350 guest rooms, 10,000 square meters of leasable space and ample amount of parking bays located on 4 basement levels. Project valued at 1 billion Qatari Riyals, is slated for completion in 2019.

QIMC Tower Lusail City

Proposed QIMC Lusail Tower is a fully residential, high rise tower and located in the Waterfront Residential District of Lusail City Doha- Qatar, in the northern part of Lusail City.

With an approximate 43,500,00 m² overall buildup area, the residential tower consists of 32 one bedroom residential apartments, 130 two bedroom residential apartments and two duplex apartments with swimming pool on the upper floors, coffee shop, a health club with external pools, a playground on the ground floor; 3 basement floors for car parking spaces and building services. Project valued at 300 Million Qatari Riyals, is slated for completion in 2019.

QIMC Logistics Warehouse Project

QIMC has a plot of 100,000 m² in Abu Saleel Area part of Industrial Area Doha-Qatar, and has been divided into two packages, Warehouse and Labor Camp.

Warehouse package is being designed and provides 37,900,00 m² storage facilities with a variety of dry store, cold store and chilled store. Each warehouse has an attached 2-storey office/wellness area. This package is scheduled for completion early 2018.

Labor Camp & Administration Building package for construction of 1152 labor accommodation and shell & core building for a retail and administration is expected to be completed in 2016.

projects under implementation
Plastic Additives

This project has been proposed to be developed in collaboration with a local investor as a Partner and as a user of these products, together with a successful Japanese company, which is marketing its plastic additive products in GCC region. The latter has been chosen as a Technology Provider and a Partner in order to ascertain the feasibility of setting up this project in Qatar. The project initial assessment will start as soon as the Memorandum of Understanding (MoU) will be signed and the required information will be provided by the Technology Supplier.

Maleic Anhydride

Maleic Anhydride (MAN) is produced easily from Normal Butane (N-Butane), which is obtained from Mixed Butane, supplied by NGL Operations. MAN is a specialty chemical used in variety of important industries, such as Alkyls Resins, Paints Formulation, Unsaturated Polyester Resins, etc. This project is under initial assessment in collaboration with few foreign partners.

Potassium Sulphate (SoP)

Potassium sulphate (SoP) is a multi-nutrient fertilizer and a source of potassium for crops sensitive to chlorine. It offers a high concentration of nutrients readily available to plants. The project is expected to come up as an add-on operation to Q-Acids, which is fully owned by QIMC, in order to diversify its product range. The project technology/equipment supplier has been selected and work is under way to implement it as soon as possible.

Sulfur Bentonite

The project is expected to produce high-quality varieties of Granulated Sulfur Bentonite, heavily used as fertilizers, especially in China, India and the Americas, representing the largest share of targeted potential export markets. The main raw material for the project is sulfur, which is abundant in Qatar, and would increase its added value. QIMC is currently in discussions with a number of technology holders for this project’s further development and its assessment is under fine tuning.
